

Out of the Box

Your package contains:
15 Bulbs

- Your bulbs are shipped to you with the utmost care.
- Once planted they may take 2-4 weeks, depending upon the weather conditions, to wake up and start growing.
- You can be assured they will begin setting roots once planted.
- They will grow very quickly and amaze you with their performance.
- We urge you to plant your new arrivals as soon as possible.
- In the event that planting must be delayed please keep these bulbs in a cool, dark dry place for a short period of time.

CAUTION

Not all plant material is edible. Though most plants are harmless, some contain toxic substances which can cause headaches, nausea, dizziness or other discomforts. As a general rule, only known food products should be eaten. In case of ingestion, please contact your local poison control center at once and advise them of the plant ingested.

Planting and Growing Guide

Border Gladiolus Mixed
Gladiolus

Gladiolus

The product we have sent to you was packaged in either wood chips or peat moss. This is done to ensure that the product arrives fresh and healthy. The bareroot items you ordered are living plants. There will be some size variance between each bareroot in your package. These items have been measured and graded prior to shipping. You are receiving the highest quality package.

Thank you for your order.

We hope you're delighted with your new plants.

Choosing a Location

When deciding where to plant, please consider the unique needs and features of this variety:

Winter Hardiness	Zones 8-10
Daily Light Requirements	Full Sun - Partial Shade
Spacing Between Plants	4-6"
Mature Height/Spread	24-26" / 4-6"
Bloom Time	Mid Summer - Frost

Planting Instructions

Although all of these items do well in average well-drained soil of all types, for optimum results you can improve your planting success as follows:

For optimum results, plant as follows:

1	Spade or Rototill the soil to a depth of 12"
2	It's Always good to add organic matter to you soil. You can mix in a 2-4" layer of dehydrated manure, garden compost, shredded leaves and/or peat moss.
3	Dig a hole large enough to spread out roots without bending them. Set crown with buds about 2-3" below the soil surface.

Continuing Care

Watering	Water well. Keep soil moist but not soggy.
Mulching	Apply a 2-4" layer of mulch to promote moisture retention, maintain even garden soil temperatures
Weeding	Keep your area around your plants free of weeds. Weeds compete with all plants for food water and light. Walk around the garden periodically and pull weeds.
Grooming	Remove spent flower stems after flowering to maintain an attractive bush type perennial all summer long.
Feeding	Discontinue any foliar or liquid feed by early September. Your plants want to harden off for Winter dormancy.
Winterizing	In zones 3-7 dig the bulbs in the fall before the first frost. Store them indoors in a cool dry place for the winter. Let the bulbs dry and cure for a few weeks prior to storing. In zones 8-10 apply a small layer of winter mulch.
