If you need assistance, we're here to help

autobrain®

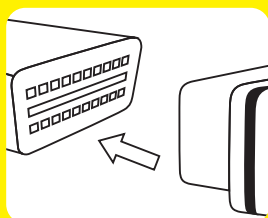

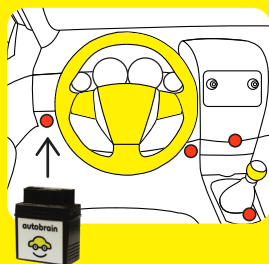

Quick Start Guide

Do you have more than one Autobrain device? If not, continue to Step 1.

If you already have an Autobrain account, we recommend adding this device to your existing account, so you can manage all of your Autobrain connected cars from one login. To link this car to your account, plug-in the new device, open the menu tab in your Autobrain app (mobile, tablet or desktop) and click "Activate New Device".

1 Plug in device

Autobrain fits right into your vehicle's OBD port, which is usually located under the steering wheel. (See diagram below for a few possible locations.) If you need help finding the diagnostic port, please call us at 1-866-400-4842.

2 Download the app

Download the Autobrain app by going to www.autobrain.com/getapp from your mobile device.

3 Create your account

Open the app or go to app.autobrain.com to create your account and activate your device. You will need your Device ID, which can be found on the outside of the packaging and on the device.

4 Take a drive

Generally, the device will sync with your account 15-30 minutes after your car has been driven, but note that it can take up to 12 hours.

5 You're ready to go

You can now access your account from the website or smartphone app.
