

Living Glow Motion Sensor Bulbs Work **ONLY IN THE DARK & WHEN MOTION IS DETECTED**

USE THESE EASY TO FOLLOW STEPS

STEP 1. Screw bulb into fixture or lamp bulb socket

STEP 2. Flip on the light switch and LEAVE IT ON

STEP 3. The light will come on to let you know it is working then it will go off

STEP 4. The light will NOT turn on until it is DARK and MOTION has been detected. The bulb will stay on for approximately 45 seconds.

STEP 5. The bulb will turn off again until motion is detected again

Did you know?

- * The bulbs do not use electricity until the bulb turns on in the dark when motion is detected.
- * The bulbs can be used inside and outside.
- * Constant motion, within range of the radar detection path, will keep the bulb from shutting off.
- * Doppler radar technology detects movement approximately 15 – 20 feet from bulb.
- * The bulbs can be used with a fixture cover
- * The Living Glow Motion Sensor LED light bulbs are great for your front porch, garage, basement, closet or anyplace you wish to have light in the dark without searching for a light switch.

“We keep it BRIGHT in the DARK!”
