

INSTRUCTIONS FOR USE

We made Living Glow battery backup light bulbs very simple to use:

What you get: 6 bulbs, 4 power caps & 1 power plug adapter

These are designed for everyday use

1. **Screw your Living Glow bulbs into any lamp or light fixture.**
2. **Turn the lamp or light fixture ON just as you normally would.**
3. **Leave the lamp or light fixture ON for 8-10 hours to fully charge the battery.** Once the battery is fully charged everyday use will keep it charged. The battery can be charged hundreds of times after being used with power outages.
4. **Living Glow Light bulbs must be used in a single source light fixture.** The bulbs will not work properly mixed with other bulbs or used in a multi-source socket and could cause the Living Glow bulbs to remain on even when you turn the light switch off.

While your Living Glow bulbs are in use, you are charging the internal battery that will act as a power source the next time you have a power outage. During a power outage, our revolutionary emergency lighting lasts 3-4 hours, and you can still control your Living Glow bulbs by using your light switch to turn them on and off. Very simple, but extremely reliable and convenient!

As an added convenience, we have included 4 Power Caps with every 6-Pack of Living Glow bulbs. To use them, just screw the Power Cap onto the bottom of your charged Living Glow bulb and hang it anywhere you need additional light. You can turn your Living Glow bulb on and off by pressing the button on the bottom of the Power Cap. To use the provided power plug adapter, unplug the lamp from the wall, connect the end of the power cord for the lamp to the adapter. This will allow the lamp to be portable and will allow the bulb to illuminate as it would with a power cap. The power adapter will not charge the bulb. Please, don't forget to recharge the Living Glow bulbs after use.

Here are some important details about the Smart Chip inside of your Living Glow bulbs:

- **The Smart Chip detects a power outage as soon as it occurs and activates your Living Glow bulb's battery to provide up to 3-4 hours of emergency light.**
- **The Smart Chip protects the Living Glow bulb's battery and prevents it from overheating or overcharging.**
- **The Smart Chip can also tell the difference between a power outage, and when you turn your light switch off or unplug your light fixture. This allows you to use your Living Glow bulbs just like standard bulbs, even during a power outage.**

TIP – To test if your chip is operating correctly simply unplug a lamp using a Living Glow bulb. When you touch the 2 prongs of the plug together with a metal object like a kitchen fork or piece of aluminum foil, the lamp will operate as if the power were still on!!

“We keep it BRIGHT even in the DARK!”
