Dear customer,

Thank you for purchasing this HP Notebook. To ensure you receive new features and a better-running PC, Microsoft is continuously updating its Windows 10 operating system. The great news is you don't have to do anything because updates will automatically be downloaded and installed whenever they are available. **For optimal performance**, HP recommends completing the Microsoft updates following your initial boot-up. Depending on the number of updates available, it may take up to several hours to complete this process. During this time, your PC responsiveness may not be optimal and occasionally your PC may need to restart to install the updates. Please follow these steps below to optimize the process.

1. Select the Start ⊞ button, select **Settings** ☐ > **Update & security** > **Windows Update**
2. Most times Windows will automatically detect updates and begin installation once the PC has internet connectivity. A list of available updates will be displayed here. If the **Check for updates** button is displayed, however, select it.

3. Once updates are installed, the PC will need to be restarted. To prevent those restarts from happening at the most inconvenient time, please select **Advanced Options**.

4. Under **Choose how updates are installed**, use the drop-down menu to choose an option:

   ☐   Schedule a restart
   ☐   Automatically restart
